

EXERCISE 8

Purpose: To learn more about using **indicator (dummy) variables** in multiple regression and the **linear probability model**. **This exercise is due on Thursday, November 10.**

Work **word problem exercises 2 and 4, pages 233 and 234** in your textbook. Work **computer exercises C3, C6, and C8 on pages 237, 238, and 239** in your textbook. Each of these exercises will count 10 points each. I want you to provide “clean” answer sheets in the sense that I want your answers to be “typed up” using Microsoft Word or some equivalent document using a Mac word processor. I will be taking up all of the exercises.
