Midterm Grading Update

To facilitate the grading of the Midterm Android App I am asking for one of the following:

a) Present your running app to drC in class either on a real device or via the emulator.
   a. For those students who have already presented in-class, you are done, if your app performed well. If you have not already presented, you should plan on presenting on Nov 9.

b) If you are distance and unable to come to class, you may prepare a video of your app in action, put the video on the web and send drC the URL.

c) If you are not doing a live presentation or video, then please submit two files to the BlackBoard Assignment Link for MidtermPlus.

The two files are:

1. A word document named with your last name (e.g. jones.doc) that contains screen shots as described below
2. A zip file of your project (all folders). When unzipped it should be capable of being run as a project in Eclipse.

Note: TWO files should be uploaded. Please do NOT submit one zip with both of the above.

The Word Doc with screenshots.

Prepare a Word document that contains Screen Shots of your App in action. The Word Document should include at minimum the following descriptive headers, followed by the screen shot. The required headers are:

   a. Data appearing in your Preferences
   b. Typing an entry in the news entry field
   c. Showing that entry in your News display
   d. Showing the Alert when a new news item is posted.

You may include any other screen shots you wish, preceded by text that describes what the viewer is looking at.
