

EXAM V REVIEW

adding record (MS Access)	multimedia database
applet	object-oriented data model
assembler	organizing activity
assembly language	parallel conversion
attribute	PDL/C
backup media	phased conversion
biometric device	planning activity
boot sector virus	planning phase
C++	polymorphic virus
change record	possessed object
Communications Privacy Act	preliminary investigation
compiler	primary key (MS Access)
completeness check	program virus
consistency checking	project dictionary
data encryption standard	prototype
data mining	range check
data privacy	relation
database approach	relational data model
database wizard (MS Access)	relational database
datasheet view (MS Access)	repetition control structure
debug	request for proposal (RFP)
decision control structure	schedule feasibility
define field (MS Access)	selection control structure
desk checking	sequence control structure
detailed analysis	servlet
direct conversion	software piracy
emergency plan	spaghetti code
encryption	steering committee
field data types (MS Access)	systems analyst
file virus	tables (MS Access)
Gantt chart	technical feasibility
groupware database	timely data
hardware theft	transaction processing
high-level language	Trojan horse virus
horizontal software	tuple
interpreter	validity check
iteration control structure	verifiable data
Java	vertical software
low-level language	voltage spike
macro virus	worm
multidimensional data model
