Software Reliability and Safety

CSE 8317 — Fall 2005

Prof. Jeff Tian, tian@engr.smu.edu
CSE, SMU, Dallas, TX 75275

OV.1. Overview

- About CSE 8317

- Defining Quality, Reliability, and Safety

- SRE: Software Reliability Engineering

- SSE: Software Safety Engineering

Quality: Views and Aspects

View	Attribute	
	Correctness	Effectiveness
Customer (external)	Failures: reliability safety	Usability Maintainability Portability Performance Installability Readability
Developer (internal)	Faults: count distr class hazard	Design Size Change Complexity control data presentation

- 8317: Reliability/safety focus
- Things contribute to reliability/safety

What Is Reliability?

- *Reliability:* Probability of failure-free operation for a specific time period or for a given set of input conditions under a specific environment
  - ▷ Failure: behavioral deviations
  - ▷ Time: how to measure?
  - ▷ Input: sampling and measurement
  - ▷ Environment: OP

- Software reliability engineering (SRE):
  - ▷ Failure and other measurement/data
  - ▷ Reliability assessment
  - ▷ Reliability and other predictions
  - ▷ Decision making and management
  - ▷ Reliability and process improvement

What Is Safety?

- *Safety:* The property of being accident-free for (embedded) software systems.
  - ▷ Accident: failures with severe consequences
  - ▷ Hazard: condition for accident
  - ▷ Special case of reliability
  - ▷ Specialized techniques

- Software safety engineering (SSE):
  - ▷ Failure prevention and fault tolerance
  - ▷ Hazard identification/analysis techniques
  - ▷ Hazard resolution alternatives
  - ▷ Safety and risk assessment
  - ▷ Qualitative focus
  - ▷ Safety and process improvement

Reliability, Safety and Defects

- Defect/bug definition/clarification
  - ▷ Failure: external behavior
    – deviation from expected behavior
  - ▷ Fault: internal characteristics
    – cause for failures
  - ▷ Error: missing/incorrect actions
  - ▷ Relations (not necessarily 1-1)
  - ▷ Safety-related: accident & hazard

- Defect and quality assurance/analysis
  - ▷ Quality (reliability/safety) analysis
  - ▷ Preventive actions based on analysis
  - ▷ Fault removal: insp./testing/verification
  - ▷ Fault tolerance

Measurement, Analysis, & Modeling

- Measurement data
  - ▷ Result: success/failure/accident/etc.
  - ▷ Indirect measurements, as predictors:
    – activity/product internal/environment
  - ▷ SQE Ch.18

- Analysis and modeling: 8317 focus
  - ▷ Data ⇒ safety & reliability
    (based on reliability/safety models)
  - ▷ Other models/analyses:
    – model categories/context: SQE Ch.19
    – defect analysis: SQE Ch.20
    – risk identification: SQE Ch.21
  - ▷ Followup actions: decisions and risk id.
    for reliability/safety/process improvement

Reliability Analyses and Models

- SRE.2: model = function relations
  e.g., failure ∼ time or input.

- Time domain approach
  - ▷ Failure arrival process
  - ▷ Statistical modeling
  - ▷ Failure count/interval/rate data
  - ▷ Time and other measurements
  - ▷ SRGMs: s/w reliability growth models
  - ▷ Assessment/prediction/decisions

- Input domain approach
  - ▷ Repeated random sampling
  - ▷ Related definitions and models
    – input domain reliability models
  - ▷ Fault seeding models

Reliability Analyses and Models

- TBRMs: tree-based reliability models
  - ▷ Both time/input domain info.
  - ▷ Additional benefit:
    - – risk identification
    - – guide for focused remedial actions
  - ▷ Technique: tree-based modeling
  - ▷ Development/application/SMU research
  - ▷ Major focus in 8317 (SRE.3)

- Other related issues: SRE.4
  - ▷ Implementation & applications
  - ▷ OP development & QA activities
  - ▷ Fault/defect modeling
  - ▷ Data treatment

Safety Analysis & Improvement

- Hazard analysis and resolution (SSE.2)
  - ▷ Focus: accidents and pre-conditions (hazards), not other failures
  - ▷ "Safeware" Ch.13-16 & SQE Ch. 16.4
  - ▷ Identification and analysis
  - ▷ Resolution: elimination/reduction/control
  - ▷ Integration in development process
    - – SSP (software safety program)
    - – "Safeware", Part IV (Ch.11-18)
- Formal verification related:
  - ▷ Main part: SSE.3, SQE Ch. 15.
  - ▷ PSC: SSE.4, SQE Ch. 16.5

Safety Analysis & Improvement

- Hazard analysis:
  - ▷ Fault trees: (static) logical conditions
  - ▷ Event trees: dynamic sequences
  - ▷ Other analyses
  - ▷ Generally qualitative
  - ▷ Related: hazard and risk assessment

- Hazard resolution (pre-accident)
  - ▷ Negate/block/mitigate/etc.
  - ▷ Hazard elimination/reduction/control

- Related: damage reduction (post-accident)

Safety Assurance & Improvement

- **Eliminate** identified hazard sources in material/component/software/etc.
- **Reduce** hazard severity/likelihood via:
  - ▷ Creating hazard barriers,
  - ▷ Minimizing failure probability, etc.
- **Control** or limit hazard scope via:
  - ▷ Isolation and containment,
  - ▷ Fail-safe design, etc.
- **Reduce** damage (post-accident, as compared to pre-accident for the above)

How CSE 8317 Fits In?

- Software reliability engineering (SRE):
  - ▷ Observation-driven SRGMs/IDRMs;
  - ▷ Progress towards measurement-driven TBRMs and other models;
  - ▷ Statistical analysis techniques:
    - – stochastic processes and curve fitting
    - – predictive risk management
    - – tree-based models & other techniques
  - ▷ reliability measurement and improvement.

- Software safety engineering (SSE):
  - ▷ Fault/event tree analyses, etc.;
  - ▷ Hazard elimination/reduction/control;
  - ▷ Process-based approach;
  - ▷ Formal verification and fault tolerance;
  - ▷ Prescriptive specification checking.
